PROJECT PROPOSAL

QR Code Meal Management App for Restaurants

Prepared For	Restaurant Owner [Restaurant name]
Prepared By	NEXA STACK Ltd, Tuyiringire Pacifique (Engineering Lead), Tel: 0781 343 621
Date	25/10/2026
Proposal Ref	PRO-2026-001
Valid Until	**26/10/2026**

1. Executive Summary

Many restaurants that serve students or regular customers on prepaid meals still use notebooks to track who has paid, how many meals are left and who has eaten. This is slow, error-prone and lets people eat without a valid payment. NEXA STACK Ltd proposes a simple mobile app. Each customer pays in advance and gets a new unique QR code every day. When you scan it, the app automatically deducts one meal from the paid balance, counting down until it is finished, and reminds the customer when only 5 meals remain. Customers get a dashboard with their balance and usage history, and you get an owner dashboard to manage everything, including walk-in customers and optional tea. The key benefit is less work, fewer errors and a clear picture of how your restaurant is performing.

2. Understanding of Your Requirements

You run a restaurant where customers pay in advance and eat regularly. Payments and meals are written in notebooks and counted by hand. Records get lost or unclear, counting takes hours and names are missed or doubled. It is also hard to know who still has meals left, or who is eating on someone else's payment, when the restaurant is busy.

Your goals are to make your work easier, reduce errors, stop meals without valid payment, let customers share their meals with others, and understand how the restaurant is doing.

3. Proposed Solution

A mobile app that uses QR codes to manage customers, payments and meals in one place:

- **Pay in advance:** you record the payment and the app turns it into a balance of meals at your meal price.
- **A new QR code every day:** each customer gets a unique QR code each day that works once, so old or copied codes cannot be reused.
- **More than one QR code:** a customer can create extra QR codes to give lunch to other people. Each scan uses one meal from their balance.
- **Automatic deduction:** when you scan, the app checks the balance, records the meal and subtracts one meal fee. It shows Valid, or Not valid when no balance is left.
- **Optional tea:** a customer can choose to add tea to a meal. The tea fee is taken from the same balance and recorded separately.
- **Walk-in customers:** you can quickly record people who pass by and eat on the go, so every meal and payment is counted, not only your regular customers.

Web: nexastack.net
TIN: 156715536

- **Countdown and reminders:** the balance counts down until it is over. The customer is reminded when 5 meals remain and again when it has finished.

4. Client and Owner Dashboards

Client dashboard	Owner dashboard
• Meals remaining and balance, counting down • Today's QR code and extra QR codes for guests • Reminder at 5 meals left and when finished • Usage history: date, time, meals, tea and guest meals • Payment history and top-ups	• Today's meals and tea served, and totals • Customers who have paid, balances, low-balance and finished lists • Scan screen with instant Valid / Not valid result • Quick walk-in record: meals, tea and amount paid • Full usage history for each customer and monthly reports

5. Scope and Deliverables

Included

- Mobile app with customer registration, daily unique QR codes and extra QR codes for guests
- QR scanning with automatic meal deduction, balance countdown and reminders (5 meals left, finished)
- Client dashboard and owner dashboard, with usage history for every customer
- Walk-in recording, optional tea on balance, payment tracking and monthly reports
- Testing with a small group of customers, staff training and launch support

Not included

- Smartphones, internet, data or SMS costs, and changes to the agreed scope (quoted separately)

6. Timeline

No	Phase / Activities	Duration
1	Discovery: meet you to understand how you manage customers and payments	
2	Design: plan screens and features based on your needs	
3	Build: QR codes, scanning, countdown, dashboards, walk-in, tea, reports	
4	Testing with a small group of customers	
5	Training, launch and ongoing support	

7. Investment(To be discussed)

8. Why NEXA STACK

We build, you scale. We are a local team in Kigali, quick to respond. We have built an e-learning platform, an e-commerce platform and a report-automation tool, and we agree scope and price in writing and stay available after launch.

Kanombe, Kigali, Rwanda

9. Next Steps

I would like to meet you to understand how you work today and agree your meal price, tea price and how many extra QR codes a customer may create each day. To proceed, sign below or contact us on 0788 768 148 / nexastack.net. We will then issue a service agreement and invoice for the deposit.

Acceptance
